No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Total number of hits satisfying chosen parameters:
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            seq length: 0

The present sequence represents a M.tuberculosis antigen, TDH-9FL The immunogenic protein, and fusion proteins containing one or more of the proteins or one of the proteins plus ESAT-6, are useful in vaccines, preferably when formulated with a non-specific adjuvant, to induce an immune response against

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antigen, TbH-9FL The immunogenic polypeptide can be used to diagnose M.tuberculosis infection by forming complexes with specific antibodies in the sample. Fragment of DNA encoding the immunogenic polypeptide can be used as diagnostic primers or probes and agents that bind to the antigen, especially monoclonal antibodies or equivalent polyclonal antibodies, are also used for diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This polypeptide comprises Mycobacterium tuberculosis antigen
ThH-9FL. It is encoded by genomic DNA (see AAV4435) isolated from a
M. tuberculosis strain H37RV genomic library using a probe from
C clone TbH-9 (see AAV44371). The invention relates to compositions
and methods for diagnosing tuberculosis. It provides polypeptides
(see AAW64291-W64379) comprising an antigenic portion of a soluble
M. tuberculosis antigen, as well as DNA sequences encoding such
tuberculosis antigen, as well as DNA sequences encoding such
polypeptides, recombinant expression vectors and transformed or
transfected host cells. Also claimed are methods and diagnostic
kits for detecting M. tuberculosis infection in a patient using
these polypeptides, antibodies or oligonucleotide probes and
c primers, for the diagnosis of tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                    Matches 391;

                                                                                                                             The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's.

M. tuberculosis Ag's, DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T, B or natural killer cells and/or macrophages in by, T, B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAZ19249 to AAZ19460 and AAY39083 to AAY39225 are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       05-MAY-1998;

                                                                                                                                                                                                                                                                                                                                                                                                 Antigen; vaccine;
                       This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity.

Compositions comprising at least 2 heterologous antigens, as a fusion protein, and vectors expressing the fusion proteins are used as vaccines to prophylactically immunise mammals (especially humans) against infection by Mycobacteria. The compositions contain at least 2 heterologous antigens that increase the serological sensitivity of individuals infected with tuberculosis, a disease frequently affecting patients with acquired immunodeficiency disease.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  fusion polypeptide. The recombinant nucleic acid comprises a heterologous polynucleotide sequence encoding an antigen or an antigenic fragment from Mycobacterium sp. and a Leishmania polynucleotide sequence encoding a polypeptide or its fragment. The Leishmania polynucleotide is selected from TSA, LeIF, M15, and 6H polynucleotides. Sequences of the invention are used in methods for eliciting immune response in mammals. They are useful as vaccines to elicit protective immunity against pathogenic microorganisms such as Leishmania and Mycobacterium tuberculosis. Fusion polypeptides are used for enhancing the expression of polynucleotides, as in vivo diagnostic agents and for raising antibodies in a non-human animal. The invention is used in gene therapy. The present sequence is Mycobacterium sp. TbH9FL antigenic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New recombinant nucleic acid molecule comprising a Leishmania TSA, LeIF, M15 or 6H polynucleotide, useful as vaccine to elicit protec immunity against pathogenic microorganisms e.g. Leishmania and Mycobacterium tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The present invention relates to fusion proteins containing at least CC two Mycobacterium species antigens, nucleotides encoding them and CC compositions comprising such fusion proteins. The present invention CC particularly relates to nucleic acids encoding fusion proteins that CC include two or more individual M. tuberculosis antigens which increase the serological sensitivity of sera from individuals infected with CC tuberculosis and methods for their use in diagnosis, prevention and CC treatment of tuberculosis infection. Sequences of the invention are CC useful for eliciting an immune response in a mammal, e.g., human, CC immunised with BCG. They are useful in the diagnosis, treatment and CC prevention of Mycobacterium infection. The fusion proteins and the CC polynucleotides are useful as diagnostic tools in patients infected CC with Mycobacterium, in vitro and in vivo assays for detecting humoral CC antibodies or cell-mediated immunity against M. tuberculosis, for the CC diagnosis of an infection or monitoring of disease progression, as CC patient and for raising anti-M. tuberculosis antibodies in a non-human CC animal. Sequences of the invention are useful as in vivo diagnostic agents CC fusion proteins of the invention are useful as in vivo diagnostic agents CC for intradermal skin test. The present sequence is Mycobacterium species

                                                                                                                                                                                    This sequence represents a recombinant Mycobacterium tuberculosis bi-antigen fusion protein, termed Mtb59f, composed of the antigens TbH9 and Ra35. The fusion protein is expressed in host cells using a vector carrying a polynucleotide (see AAZ20205) comprising the coding sequences for the 2 antigens. The invention provides fusion proteins (see AAY32059-71) containing at least 2 M. tuberculosis antigens. The new fusion proteins and polynucleotides encoding them are useful as vaccines for preventing tuberculosis (claimed), for diagnosis (via in vitro assays or intradermal skin tests for detection of anti-M. tuberculosis antibodies), monitoring of disease progression, and treatment of tuberculosis. They are more effective immunogens than mixtures of the individual protein
                                                                                                        Sequence

                            The invention relates to a recombinant nucleic acid molecule encoding a fusion polypeptide. The recombinant nucleic acid comprises a heterologous polynucleotide sequence encoding an antigen or an antigenic fragment from Mycobacterium sp. and a Leishmania polynucleotide sequence encoding a polypeptide or its fragment. The Leishmania polynucleotide is selected from TSA, LeIF, M15, and 6H polynucleotides. Sequences of the invention are used in methods for eliciting immune response in mammals. They are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Skeiky
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             13-MAR-2001; 2001US-275837P
